TECHNICAL SKILLS

Languages

Ruby, Python, TypeScript, JavaScript, SQL

Web

Rails, React, Node.js, HTML, CSS, REST APIs

Data

PostgreSQL, Active Record, SQLite, data modelling

Tools

Git, Docker, Hotwire, Stimulus, Mapbox, Whisper

AI

Transcription, prompting, retrieval workflows, explainable agents

LANGUAGES

Spanish	Native
English	C2
Catalan	B1
Dutch	A1

EDUCATION

Finance & Trading Course
2026

Le Wagon
AI Software Development
2023 · Barcelona

Amplify Trading

2014

RUBY ON RAILS, PYTHON, TYPESCRIPT & SQL | AI PRODUCTS, DATA SYSTEMS, AND OPERATIONAL TOOLS

Software engineer trained in full-stack development with hands-on experience building Ruby on Rails products, TypeScript applications, relational data models, and AI-assisted workflows. Interested in backend, full-stack, and data-focused engineering roles where careful systems thinking and product usability matter.

EXPERIENCE

De Bommel · Webshopper (DHL) · 2025

Prepared and processed online customer orders from the De Bommel webshop for DHL dispatch, following warehouse and shipping procedures.

Home Fundraiser Ltd, London · Team Leader & Planner · 2017

Coordinated team planning, daily activities, and communication in a target-driven field operation.

Transjunior Logistics · Inbound & Outbound Logistics · Earlier experience

Worked across inbound and outbound logistics operations, supporting the movement and organisation of goods.

FINANCE & MARKETS TRAINING

Amplify Trading · Applied Finance · 2016

Completed live market simulations using real-time market data, making time-sensitive trading and risk decisions across FX pairs and equity-index futures, including the Dow Jones and S&P 500.

- Practised technical and fundamental analysis, macroeconomic event interpretation, market monitoring, and trade rationale in a simulated trading environment.

SELECTED PROJECTS

City Gardens · Four-person Le Wagon team project · Nov-Dec 2023

A community-garden platform connecting contributors with gardens through maps, events, bookings, parcels, and reservations.

- Contributed to garden and parcel-management flows, reservation paths, nested Rails routes, PostgreSQL migrations, seed data, and responsive views.
- Worked across controllers, models, views, schema, routes, and styling in a merged 20-file pull request.

Ruby on Rails · PostgreSQL · Active Record · Hotwire · Mapbox · Geocoder · Cloudinary

DispatchOps · Playable logistics simulation

A human-in-the-loop dispatch game with a deterministic shift engine, an explainable assignment agent, timed incidents, and a decision debrief.

- Built the React and TypeScript interface and tested the state machine, responsive operations map, and transparent synthetic scoring.

React · TypeScript · Node.js · Deterministic simulation · 13 tests

Polybow Forensics · Live-system case study

An anonymized reconstruction of 1,137 live prediction markets, separating an early account peak from the final drawdown.

- Reconciled 1,590 trade rows and documented risk concentration, data quality, and missing operational controls across the full experiment.

Python · Data reconciliation · Risk analysis · Reproducible research

STRENGTHS

Build features end to end · translate product requirements into clear interfaces · model data and relationships · debug methodically · document decisions · collaborate in English and with remote teams.
