I build small agent-facing tools with a human still in the loop: MCP servers, quoted evidence, and tests on the protocol boundary. Not model training, not a production RAG platform.

PROJECTS

Relay

- Four read-only MCP tools on the official Python SDK — search, summarise, review, export — sharing the web matcher.
- Tests cover stdio and HTTP. No model decides eligibility.

Pattern Forge

- A product an agent can be pointed at: charts, replay, no later prices in the calculation.
- Not a model and not a forecast. CI checks tests and Docker.

Python trading bot

- Postmortem of a live system: ledger and timings, not a claimed trading edge.
- The public repository is the case study, not the private bot.
