TECHNICAL SKILLS

Languages
Ruby, Python, TypeScript, JavaScript, SQL

Web
Rails, React, Node.js, HTML, CSS, REST APIs

Data
PostgreSQL, Active Record, SQLite, data modelling

Tools
Git, Docker, Hotwire, Stimulus, Mapbox, Whisper

AI
Transcription, prompting, retrieval workflows, explainable agents

LANGUAGES

Spanish	Native
English	C2
Catalan	B1
Dutch	A1

RUBY ON RAILS, PYTHON, TYPESCRIPT & SQL | AI PRODUCTS, DATA SYSTEMS AND OPERATIONAL TOOLS

Software engineer trained in full-stack development, with hands-on experience building Ruby on Rails products, TypeScript applications, relational data models and AI-assisted workflows. Interested in backend, full-stack and data-focused engineering roles where careful systems thinking and product usability matter.

EXPERIENCE

Logistics Company · Online Order Preparation (DHL) · 2025
Prepared and processed online customer orders for DHL dispatch, following warehouse and shipment workflows.

Home Fundraiser Ltd, London · Team Leader & Planner · 2017
Coordinated team planning, daily activity and communication in a target-driven field operation.

Transjunior Logistics · Inbound & Outbound Logistics · Earlier experience
Worked across inbound and outbound logistics workflows, supporting the movement and organisation of goods.

FINANCE & MARKETS TRAINING

Amplify Trading · Applied Finance · 2016
Completed live market simulations using real-time market data, making time-sensitive trading and risk decisions across FX pairs and equity-index futures scenarios, including the Dow Jones and S&P 500.

- Practised technical and fundamental analysis, macro-event interpretation, market monitoring and trade rationale in a simulated trading environment.

SELECTED PROJECTS

City Gardens · Four-person Le Wagon team project · Nov-Dec 2023
Community-garden platform connecting contributors with gardens through maps, events, bookings, parcels and reservations.

- Contributed garden and parcel-management flows, reservation paths, nested Rails routes, PostgreSQL migrations, seed data and responsive views.
- Worked across controllers, models, views, schema, routes and styling in a merged 20-file pull request.

Ruby on Rails · PostgreSQL · Active Record · Hotwire · Mapbox · Geocoder · Cloudinary

DispatchOps · Playable logistics simulation
Human-in-the-loop dispatch game with a deterministic shift engine, explainable assignment agent, timed incidents and decision debrief.

- Built the React and TypeScript interface, tested state machine, responsive operations map and transparent synthetic scoring.

React · TypeScript · Node.js · Deterministic simulation · 13 tests

Polybow Forensics · Live-system case study
Anonymized reconstruction of 1,137 live prediction markets, separating an early account peak from the final drawdown.

- Reconciled 1,590 trade rows and documented risk concentration, data quality and missing operational controls without claiming profitability.

Python · Data reconciliation · Risk analysis · Reproducible research

STRENGTHS

Build features end to end · translate product requirements into clear interfaces · model data and relationships · debug methodically · document decisions · collaborate in English and remote teams.
