I build data workflows that validate inputs, preserve time boundaries and make stored evidence inspectable.

SKILLS

Languages: Python, JavaScript, TypeScript, Ruby, SQL, HTML, CSS.

Data and integration: PostgreSQL, SQLite, REST APIs, WebSockets, MCP, JSON/JSONL.

Data and research: Pandas, NumPy, time-series analysis, feature engineering, backtesting.

Applications: React, Next.js, Ruby on Rails, FastAPI, Node.js, Hotwire.

Engineering: Git, Docker, GitHub Actions, automated tests, debugging and documentation.

SELECTED ENGINEERING WORK

Pattern Forge: Built market replay that recalculates indicators from available candles only. Tests exclude incomplete timeframes and future data.

Info Desk: Built versioned evidence retrieval and cited AI drafts, with tests for invalid citations and interrupted jobs. Live research runs locally; the public demo is recorded.

Relay: Exposed one Python evidence matcher through HTTP and MCP. Integration tests exercise real protocol calls and source-preserving exports.

Haystack #12635 - merged: Fixed validation rejecting zero-valued hierarchy metadata; added a regression test and release note.
