## LANGUAGES

Spanish - Native

English - C2

Catalan - B1

Dutch - A1

I build the interface and the API behind it: React and TypeScript on the front, Python or Rails on the back, with tests and Docker so a change has a check.

## PROJECTS

### Pattern Forge

- React/TypeScript chart and Next.js candle API; replay without look-ahead.
- CI: tests, Docker image and PostgreSQL restart. The public demo does not serve that database.

### Relay

- One FastAPI service behind a React board and MCP tools, so the browser and the agent see the same matcher.
- pytest covers validation, duplicates and MCP transports. Matching is literal, not an eligibility score.

### Python trading bot

- Python/WebSocket execution on AWS Lightsail; public ledger and timing parser after live trading stopped.
- The public repository is the postmortem, not the private bot.
